Co-digestion of cow dung and banana waste: ecological performance and GHG emissions. Biological digestion is well-known technique for the organic treatment of large volume of solid waste. In this study, the co-digestion of cow dung and banana waste was undertaken to investigate the anaerobic biodegradability of banana waste using cow dung with the aim to fill the biogas gaps of cow dung digestion and increase the organics removal efficiency. The anaerobic biodegradability indices such as hydrolysis rate (HRT), anaerobic hydrolysis (%) (AH), hydrolysis quotient (HQ) and methane production potential (BMP) were performed using modified Rumah-Makmur's Anaerobic Digestion Test method (RMAT) and Haldane-Ankrum's method. Cinamon (C), a by-product of banana cultivation and discarded as a agricultural waste, could

## What's New In?

Nu Jongg is a widget designed to replicate the most famous solitaire game based on Mah Jongg tiles. The game is played by moving tiles around a customisable grid. You have a limited supply of tiles and can only move tiles you own. Each tile has a suit and a number between 1 and 13. You can think of each tile as a note on a piece of paper. Move the tiles to score points. The game ends when one of the following occurs:  You score 50  All the tiles are removed  All the tiles are on the board  
Nu Jongg has two different layouts:  A5 layout: 5 columns, 25 rows. This is the default.  A4 layout: 4 columns, 16 rows  
When starting the game you can play in tileset one or tileset two. Tileset one: Suit values are from 0-6 and the card number values are from 1-13. Tileset two: Suit values are from 7-8 and the card number values are from 1-13. If your game is using tileset two you can easily change the row number of a card. For example, you can change the row number in order to adapt it to a suit you have no other number for. This is important in Mah Jongg because, for example, in tileset two we have 7 and 8 in suit 0 (Diamonds). You could have for example a tile where the suit values 7 and 8 are on the same row. However, these tiles in tileset two will not be together and you can't move them. This is not a problem because these tiles are on the top of the board. The Nu Jongg widget has a slider and you can use it to adapt the row numbers and the distribution of the tiles. The slider is always visible from the titlebar and if you slide it while holding the left mouse button you'll see the tiles disappear and come back. This is a nice feature, but not needed, because you can use it as a slider to adapt any value. As stated earlier, you can use two tilesets but you only need one tileset in the start. If you only start using tileset two, you will need to set the tileset again with the slider. If you start in tileset one, just leave all the values in

---

## System Requirements:

To run the game on your desktop PC, you will need an Intel compatible processor with support for SSE4.1 and CMPXCHG16B. To run the game on your laptop PC, you will need a processor with support for SSE4.1 and CMPXCHG16B. To run the game on your laptop you will need a powerful dedicated GPU. To run the game on your laptop and to play some of the game (see below), you will need a Nvidia, AMD, or Intel GPU with
