## TekSIP 3.4.6.0

It's time for you to start SIP monitoring and management! With TekSIP you can bring features directly to your network, such as remote IP address filtering, logging, SILK streaming support, RADIUS authentication support and more. TekSIP has a number of features that will make managing your SIP network easy, which include: Broad support for all versions of the SIP protocols TekSIP is an application that can be used as a SIP VoIP proxy and makes SIP monitoring and management very easy. It supports most of the SIP protocols, including: SIP v.11 (over TLS) SIP v.12 (Internet and User Datagram Protocol) SIP v.17 (Session Initiation Protocol) SIP v.22 (Session Initiation Protocol) SIP Inter-Asterisk SIP Protocol

**TekSIP Description:** TekSIP is an easy-to-use tool that can be used as a SIP proxy and makes SIP monitoring and management very easy. Features include: Perform actions on your sip calls, such as toggling call forwarding Powerful logging - over 100 different events can be logged for your sip sessions SIP Filtering - block or allow incoming and outgoing sip calls Stream your calls to SILK - audio and video calls can be made and received using TekSIP Support for all versions of the SIP protocols TekSIP has a number of features that will make managing your sip network simple, including: Perform actions on your sip calls, such as toggling call forwarding Powerful logging - over 100 different events can be logged for your sip sessions Stream your calls to SILK - audio and video calls can be made and received using TekSIP TekSIP can be used as a SIP proxy - including some very useful features such as adding DN/dns entries, configuring DHCP, RADIUS, and NAT TekSIP can be used as a SIP registrar - including some very useful features such as adding and removing SIP endpoints (active sip endpoints count as one endpoint), and performing various tasks on sip sessions (such as toggling call forwarding) TekSIP also supports other SIP protocols, such as IAX and IMS, and enables authentication through a firewall (more information about the supported protocols is available at

## What's New In TekSIP?

TekSIP is an application that is very easy to setup and use. It allows you to set up access control, perform protocol conversion and keep an eye on the connections to the SIP/VoIP network, while providing high-quality VoIP services. Major features: Acts as a SIP/VoIP proxy Provides a full range of services to the interface Supports the TekSIP proxy/registrar model Works in conjunction with the RFC 3261/3311 SIP protocols You can use it to intercept and modify the VoIP traffic in dial-up and peer-to-peer networks Supports the STUN server, without which you cannot accept incoming connections Performs access control and provides a user interface Supports authentication, with the use of RADIUS Performs UDP, TCP and TLS transport protocols Supports HTTP/1.1 Supports video streaming protocols Can employ multiple SIP domains in the communication Supports incoming and outgoing display capabilities Enterprise Firewall Manager is used to provide management and monitoring of firewalls, gateways, VPNs, USB drives, and other devices that may be vulnerable to hacking or denial of service attacks. This article describes the features of Firewall Manager. Installing the Firewall Manager Firewall Manager installation is supported on many versions of Windows. The easiest way to install and configure Firewall Manager is using the MSI file available for download. This file can be downloaded and installed by all versions of Windows. Installing the Firewall Manager Windows 2000 and Windows XP users can use the standard installer. Windows Vista or Windows 7 users should use the Firewall Manager MSI installer (32-bit only). Windows 8 users should download and install the Firewall Manager (64-bit) using Windows Store and install the application from the application list. Windows Server 2008 or later users should download and install the Firewall Manager (64-bit). Step 1: Start the Firewall Manager Setup Wizard Click Start and then click Run or press the Windows key + R, type the following and press Enter: %ProgramFiles%\Firewall Manager The Firewall Manager Setup Wizard starts. Windows 2000 or Windows XP users will see the following screen. Step 2: Review the default settings When the Firewall Manager Setup Wizard is finished, review the default settings, including whether or
